

ProcessMind Third-Party Code Policy

Effective starting: June 24, 2024

Open Source Software

Our Services are enriched by the integration of third-party technologies, which are governed by their respective open source or source-available licenses. These licenses detail the permissions granted to customers regarding the use, replication, modification, creation of derivative works, and redistribution of such third-party technologies, collectively referred to as "Open Source Software." In instances where it is mandated, we provide due attribution to the Open Source Software included with our Product, in alignment with the stipulations of the applicable open source or source-available license(s).

We extend our deepest gratitude to the vibrant community of developers and contributors who dedicate their time and expertise to open source projects. Their contributions significantly enhance the technological landscape, and we are proud to be a part of this ecosystem. We actively engage with the community, not only by utilizing open source technologies but also by contributing back. Our team is committed to upstreaming improvements and sharing our developments whenever possible, fostering a culture of collaboration and mutual growth.

Below is a comprehensive list of all the open source technologies we utilize, along with the necessary attributions and links to their respective licenses. We encourage you to explore these projects and join us in acknowledging the incredible work of these contributors.

Here is the [list of all open source](#) we use
